

Four documents related to PFAS Sampling are provided:

- 1) PFAS Quality Assurance Project Plan Addendum, an addendum to the Quality Assurance Project Plan specific to analytical methods for PFAS
- 2) QAPP Comments, containing EPA's comments on the QAPP addendum and responses
- 3) PFAS Standard Operating Procedure, outlining field methods for PFAS sample collection
- 4) PFAS Results, showing the groundwater sampling locations and PFAS results
- 5) PFAS Resample, showing the results for sample recollection at one well which initially had anomalously high results. This was suspected to be from the construction of the older well. A new well was installed and yielded lower PFAS concentrations, indicating the well construction was the source of the higher concentrations initially.
